London, UK**

IAC Bulletin ARCH/05.00

IAC EQUIPMENT SUPPLIED:

13 Noise-Lock® Acoustic Doorsets

As the UK's only acoustic products manufacturer to offer instant delivery on steel acoustic doorsets, IAC has helped a major commercial radio station hit crucial deadlines for transferring its operations to new studios in south east London. IAC supplied thirteen Noise-Lock® doors, from a range of four standard designs it keeps permanently in stock, for the new HQ of *talkSPORT Radio* (formerly Talk Radio). Rapidly installed just a few weeks before the station began broadcasting live from its new site, the doors have a certified and field-tested acoustic rating of STC 47. This level of performance means that an effective acoustic barrier is created between the studios and potentially noisy adjacent office areas.

IAC manufactures a complete range of standard and customised acoustic doors, all of which are factory assembled and tested for correct alignment, fit and ease of operation. The doors all have steel split frames, powerful magnetic seals and either cam-lift or level-swing hinges. Acoustic performance ranges from STC 43 to STC 64.

IAC doesn't just supply doors for buildings which have an obvious acoustic sensitivity, like radio and TV studios. Recent applications include everything from hospitals, schools, shopping centres, nightclubs and theatres to plant rooms, factories and power stations; even rooms in which the police interview crime suspects! Since commencing operations in 1958, IAC has manufactured over 100,000 acoustic doorsets, proving that they are used far more widely, and imaginatively, than their 'specialist' tag might suggest!
